Ballybride GMI Bernadette

Ballybride Dano was purchased from a typical Irish Grassland Herd. His dam, Bernadette is the no. 2 EBI cow in Ireland, which basically means that she is amongst the most extreme cows for production, protein and fertility traits. She has to date done 5 lactations, some at over 9% combined Fat and Protein, and is still above herd average for milk kgs. She has held first time each lactation, and is due again with her sixth in February. This fertility is even more impressive when you consider that Bernadette has had two sets of twins, yet has still got over the calving, produced above herd average and got back in calf first time. She truly is a profitable grassland cow!!
