7	7137	237	4.06	3.36

Carracoush Magpie 75 VG87 (Dam of Tisabri)

Carracoush Tisabri FH2736

The dam of Tisabri was spotted on our first genetics trip to Ireland three years ago. It took two years to get a bull from her but it was well worth the wait! Magpie 75 is in her 6th lactation now, consistently calving regularly in a tight spring calving herd with up to 3.8% Protein. The family has been in the herd for generations, which shows their ability to produce above herd average whilst getting back in calf.

The sire of Tisabri is the most extreme bull in the world for calving ease, somatic cell count improvement and daughter fertility.
