5	11/05/00				

*Magpie 75 is in her sixth lactation consistently calving regularly in a tight spring calving herd with up to 3.80% protein. The family has been in the herd for generations, which shows their ability to produce above herd average whilst getting back in calf. The sire of Tisabri is the most extreme bull in the world today for calving ease, somatic cell count improvement, longevity and daughter fertility.*
