

# Penn-England GARRISON-ET

by Tom Harkenrider

GARRISON is the result of a strong cow family developed in a commercial, free stall environment. One of the few Magic sons sampled in AI, he is a logical choice for producers wanting a different pedigree with fat test and type. GARRISON was bred and acquired from Dr. Barry & Fred England, Williamsburg, PA. His Rock Solid Genetics status, fine daughter photos, component levels, and terrific feet, legs, and udders are a winning combination. Top 50 TPI!

## Family Information

The dam of GARRISON is a high Productive Life (+2.7), high test (4.4%) daughter of DUSTER. She comes straight from the "G" family at the Peck's, Welcome Stock Farm in NY. His grandam was purchased by the England's and Londondale Farms for \$20,000 at the National Holstein Convention Sale in Pittsburgh, PA as a 2-year-old. She was flushed extensively and has several VG daughters at England's, London's and Peck's. The family is noted for their high fat yield and trouble free lifestyle. Many bulls from this family appear in active line-ups around the world.

## Daughter Information

Reports from the field on the GARRISON daughters have been outstanding. The daughters are admired for their great frames, deep open rib with great width. This width allows for a high, wide rear udder attachment with a strong fore udder. They possess an extremely close teat placement with a strong udder cleft. The daughters have a deep heel and track straight on the rear legs.

## Mating Information

GARRISON will cross well on milking daughters of BW Marshall, Durham, , GORDON, J Ford, Lee, and S-MAN.
