Genus Breeding

NEW EASY CALVING BELGIAN BLUE

Greystone Vagabond is the latest in the Genus ABS Belgian Blue stud to complete his calving survey and has been ranked as an exceptional easy calving sire, another tremendous bull to join our line up from the Greystone herd.

Neil Wharton, Beef Director for Genus ABS says, "Vagabond is a really easy calving sire with a score at under 2.0%, which will mean very few calving problems and amazingly still has an excellent Calf Quality score of 56%. He has a short gestation length at 280 days, which is three days shorter than the breed average, and with the current increase in milk price, every extra day in milk is worth £4 per day, making an extra £12 on Gestation length alone."

"All this plus him having the Blue roan calf, that makes him ideal for crossing on the dairy or beef herd makes Vagabond a really exciting sire to add to our Belgian Blue line up," he adds.
