### **'MEGA' NEW PRODUCTION SIRE**

**Mr Million Mega-Man joins the Genus ABS stud where he has taken the place as their number 1 sire for milk production.**

A Comestar Outside son, he follows in the footsteps of his grand dam, Muranda Oscar Lucinda who in November of 1997 made headline news by becoming the new world record milk producer with credits of 30,870kg at 3.3% fat and 3.3% protein.

"Mega-Man is a great new sire to join our line-up," commented Andrew Rutter, Breeding Programme Manager. "In our American stud he ranks as the second highest TPI sire, just behind Shottle. His daughters are easy-care cows that produce huge volumes of milk with seemingly little effort. This elite production is combined with incredible shallow udders and negative somatic cell counts," he concluded.
