NEW OUTCROSS, CALVING EASE SIRES AVAILABLE AS SEXED SEMEN

Two new exciting sires, bred from different branches of the same cow family have joined the Genus ABS Sexation line-up.

Kings-Ransom Donairo is a MOET Lookout son bred from one of the highest profile cows in the US, Pen-Col Mtoto Dima VG88. Hugh Ratcliffe, Genus ABS European Business Development Manager explains, "This superior brood cow has bred numerous high ranking bulls and females, with Donairo being amongst the best. He offers plenty of milk kgs from cows that are below average for stature so is also suitable for cubicle systems."

Just like the Lookout daughters, Donairo specialises in siring tremendous feet and legs, alongside high and wide rear udders. He also sires exceptional health and fitness traits, which make him easy to use. Mr Ratcliffe continues, "He is very easy calving, so will be suitable to use on maiden heifers this spring, combined with +0.2 Lifespan, -24 for somatic cell counts and above average daughter fertility index."

Also available is Kings-Ransom Dover. Dover is amongst the world's first proven Laudan sons and is bred from an EX Debut daughter of Mtoto Dima, the dam of Donairo. "A sire stack of Laudan x Debut makes Dover an outcross to many of the common bloodlines used in the UK over recent years, making him easy to use across a group of heifers. Like his sire, Dover specialises in siring low maintenance cows who will get back in calf significantly quicker than average (+5.5 for daughter fertility index). He combines excellent fat and protein percentages with negative somatic cell counts and very easy calving. Type wise the Dover daughters will again be below average for stature with shallow, well attached udders." Concludes Mr Ratcliffe.
