

29HO11614 Ked Outside JEEVES-ET TL*TV

By: Tom Harkenrider

JEEVES comes from the heart of the cow family which produced the all-time ABS favorite, JUROR. The combination of extraordinary pedigree, favorable production, great type and the increasingly important management traits will make JEEVES a popular choice for producers. JEEVES sires the kind of cattle that will be profitable for several years.

Family Information

JEEVES is one of the last bulls to enter AI from the world re-known herd of Keith & Debbie Decker in western PA before their dispersal in 2004. The family really needs no introduction. It is safe to say that the dam of JEEVES, Julienna 2E-94 and her full sister, Juliemma 2E-92 are the best pair of full sisters by DUSTER. The grand dam Justine was a tremendous brood cow. In addition to the exceptional DUSTER daughters and her son, JUROR, she has a 90 point daughter by R HERO, two 92 point daughters by Blackstar and 91 & 90 point daughters by Emory. The family has continued to do well for their new owners following the dispersal. Additional young sires from the family will appear in ABS brochures' for years to come.

Daughter Information

JEEVES daughters are well balanced cattle with noticeable width and strength throughout. This width carries thru to the rump with an ideal slope from hips to pins. They do show a little more flex in the hock, but do track straight with a deep heel. The daughters exhibit youthful udders, carried close to the body wall with a snug fore udder attachment. They have a strong udder cleft with a close front teat placement and correct teat length.

Mating Information

JEEVES should not be used in the heifer pens. He will cross well on milking daughters of BOLIVER, DIE-HARD, DUNDEE, GARRISON, PROSPECT, REECE and SHOTTLE.
