

29HO11355 KELLERCREST LANGDON-ET By Susie A. Martin

LANGDON offers a package of profitable yields, strong framed cattle with feet, legs and udders built to last. In addition, he offers problem free cattle that have low somatic cell counts and have ideal calving intervals. His dam completes four generations of excellent udders and LANGDON sires an udder perfect for all milking systems.

Family Information

LANGDON hails from Kellercrest Registered Holsteins, Inc. in Mt. Horeb, Wisconsin. They milk 300 cows and have a RHA of 28,031M 3.74% 1050F 3.1% 868P and a BAA of 105.6. LANGDON'S dam, Manfred Lovely is one of the finest milking Manfred daughters in the Midwest USA. She has completed 4 lactations with a current lifetime production of 156,990 and she will make about 42,000 pounds of milk this lactation. She has an EX Wade sister and a VG-88 Forbidden daughter. LANGDON'S grand dam is the brood cow at Kellercrest; Winken Lusty will be 17 years old in July of 2007 and has numerous daughters, granddaughters and a great-great-great- great granddaughter at Kellercrest. Currently, they are milking 19 descendants plus 27 calves and heifers can be traced back to Winken Lusty.

Daughter Information

LANGDON daughters are tall, strong, open ribbed cattle with superior feet and legs. He sires a steep foot angle and the daughters track extremely well especially when viewed from the rear. In addition, LANGDON will add some slope to the rump, a trait many dairymen are looking for. The udders are outstanding, high, wide rear udders and fore udders that are snugly attached to the body wall. Furthermore, he sires low somatic cell count and parlor perfect teat placement, ideal for milking parlor efficiency.

Mating Information

LANGDON will cross well on the milking daughters sired by DIE-HARD, PIPPEN, BOLIVER, REVENUE, BLUE RIBBON, TABOO, Lancelot and September Storm.
