

## **POWERSTART instant<sup>®</sup> preserves more true protein...**

- Protein in grass is made up of two components:
  1. True protein which your cow needs for maintenance, growth, lactation and fertility.
  2. Other protein breakdown products, such as Ammonia, Amides etc, which are used much less efficiently.
- The faster the fermentation, the more valuable true protein is preserved for use by your cow.
- In trials conducted at IGER Powerstart Instant preserved more true protein.
