

## 29HO13799 De-Su VENTURA-ET \*TV\*TY

By Paul Trapp

Want to increase production and not sacrifice udders? Then VENTURA is your bull. He is the newest grad from the De-Su Georgia family. Like his cousins MOTIF and GRANDMASTER, VENTURA daughters will produce lots of milk from a beautiful udder.

### Pedigree Information

Sire: Pasen Marsh-ET

       Lifetime: 2799d 181740M 4.0% 7321F (8 lactations)

### Family Information

De-Su Holsteins is located in NE Iowa just a stones throw from Minnesota and across the Mississippi River from Wisconsin in New Albin, IA. Dean and Sue Meyer farm with their two sons Darin and Dustin. Over the past twenty years, De-Su has grown from a typical Midwest tie-stall herd to milking right at 1100 cows three times a day with a tank production average over 90 lbs. VENTURA is sired Pasen Marsh who is a full brother to the ABS favorite bull Pasen MANGO. VENTURA's family has lived at De-Su for several generations. Patron Gold lived to over ten years of age and produced over 200,000 lifetime. She was a tremendous silky dairy cow with an excellent udder. Unfortunately she was not a great flush cow, but she did leave VG daughters sired by Hershel, Garter and BWM. Patron Gold's most famous daughter is BWM Georgia EX-90 who is still alive and producing in the herd today at over 9 years of age. Unlike her mother, Georgia has flushed extremely well, as she has VG daughters by O-Man (3), Finley (3), Sosa, SHOTTLE, JET STREAM (2), Sharky, Allen and Manager (2). In addition, Georgia has 25 more GP daughters to date. Many of the De-Su prefixed bulls you have seen in the ABS Bull Book are related to VENTURA. VENTURA has maternal brothers sampled at ABS sired by BOLIVER and Planet. The sister to 6290 is Oman 6121...she is the dam of 529HO13454 MOTIF and 29HO13494 GRANDMASTER. One thing that has impressed me about the Georgia family is no matter what bull was used on the family...the resulting daughters always have good udders and they age gracefully. If this was not enough to impress you, Goldfinger was the maternal brother to Lead Gretchen and ABS favorite 29HO9154 GORDON's MGD is the 5<sup>th</sup> dam of VENTURA. ABS has invested heavily into this successful commercial family and great results are just starting!! Watch your Bull Book for more exciting members in this awesome family.

### Daughter Information

VENTURA daughters are moderate sized cows with great udders. He will sire daughters with strong fore udder attachments as well as widen out the rear udder attachment and shorten the teat. A great foot and leg sire, VENTURA daughters walk on a steep foot and he will straighten the leg.

### Mating Information

Use VENTURA on HAYDEN, SHOTTLE, JEEVES, AMMOBOOSTERMATSON, PENNYMAKER and REECE.
